Home Automation Made Easy

Mailbox Sensor

- Ring Mailbox Sensor is a battery-powered motion sensor that sends you real-time notifications via the Ring app when your mailbox opens.
- Mailbox Sensor connects with Amazon Sidewalk out of the box. You do not need a hub device like Ring Bridge or Alarm Pro Base Station (sold separately) if your Mailbox Sensor is using Amazon Sidewalk to connect.
- Connect Ring Mailbox Sensor to an Alexa-enabled device and Alexa will notify you when your mailbox has been opened.
- Link with Ring Smart Lighting, Cameras, and Doorbells to turn on and start recording when the sensor detects motion.
- Adjust the motion sensitivity in the Ring app to fit your home.
